Airtable Hiring System & Candidate Evaluation

A practical Airtable-based recruitment workflow for collecting applications, organizing candidate records, evaluating applicants, and tracking hiring progress.

Project Overview

I built an Airtable-based hiring management system designed to centralize job applications and support a structured candidate review process. The system brings application details, CV attachments, professional profiles, evaluation scores, status tracking, and recruiter notes into one organized workspace.

The Challenge

When candidate information is spread across forms, email messages, CV files, LinkedIn profiles, and separate notes, it can become difficult to review applicants consistently and follow up efficiently. The goal was to create a single, structured workspace for managing the application lifecycle.

Job Application Form

A structured application process captures the candidate’s name, email, position applied for, phone number, LinkedIn profile, portfolio or website, application message, and CV.

Centralized Candidate Database

Each submission becomes an individual Airtable record, giving the reviewer one place to access the candidate’s application information and supporting documents.

CV & Document Management

CV files are attached directly to candidate records so application documents can be reviewed alongside the candidate’s other information.

Candidate Evaluation

The system uses five rating categories: Communication, Experience, Skills Match, CV Quality, and Interview Score. These ratings create a consistent framework for comparing applicants.

Overall Score Calculation

The Overall Score uses the five rating fields to calculate an average score out of 5, making candidate comparisons easier and more transparent.

Status Tracking

Application records include a status field that can be used to track candidates through stages such as New, Screening, Interview, Shortlisted, Rejected, or Hired.

Recruiter Notes & Follow-Up

Notes provide a place to document candidate strengths, areas needing improvement, and recommended follow-up actions.

Candidate Evaluation Example

The evaluation workflow produces a simple, comparable score. For example, a candidate rated 4 for Communication, 4 for Experience, 4 for Skills Match, 5 for CV Quality, and 3 for Interview Score receives an Overall Score of 4.0/5.

Evaluation Area	Rating
Communication	4 / 5
Experience	4 / 5
Skills Match	4 / 5
CV Quality	5 / 5
Interview Score	3 / 5
Overall Score	**4.0 / 5**

Workflow

1. Candidate submits application
2. Application information enters Airtable
3. CV and professional profiles are reviewed
4. Candidate is evaluated using structured ratings
5. Overall Score is calculated
6. Application status is updated
7. Recruiter notes and follow-up actions are recorded

Tools Used

Airtable • Airtable Forms • Candidate CV attachments • LinkedIn • Portfolio links

Skills Demonstrated

• Airtable database design and organization

• Form creation and structured data collection

• Candidate and document management

• Recruitment workflow design

• Structured candidate evaluation

• Formula-based scoring

• Application status tracking

• Recruiter notes and follow-up management

Project Outcome

The completed system provides a centralized hiring workspace that makes candidate information easier to collect, review, compare, and track. It demonstrates practical ability to turn a recruitment process into a structured digital workflow using Airtable.
